Washington, DC 20554

Re: WT Docket 11-65

Dear Commissioner McDowell :

When we heard about AT&T's intention to acquire T-Mobile and bring mobile broadband to more areas of the country than are currently being served, we were curious about how that would affect my community, Sioux City, IA. It turns out that the AT&T-T-Mobile merger would allow the companies to combine their technology, resources and equipment and bring super-fast wireless broadband to Sioux City much faster than would have been possible otherwise.

This is truly great news for our community.

The proposed merger means better educational opportunities for our children, including those at the Sanford Center, an advocate for troubled youth and underprivileged families in Sioux City for decades. As Executive Director of this organization, we strive to ensure that our youth are prepared to be productive citizens and ready to make a contribution to Sioux City and society as a whole.

There are a number of critical factors that play a part in helping children become happy, productive and fulfilled members of our community. Education and strong support systems such as family and friends are most important. But an often-overlooked factor is access to technology because it plays such an important role in education and employment.

Students will be able to use the wireless network to conduct online research more efficiently and effectively. Teachers will have high-speed access to online resources to make the educational experience for students interesting, compelling and more effective.

We believe that the proposed merger between AT&T and T-Mobile is going to improve our community, create more opportunity for the impoverished and give youth a chance in life.

As the Federal Communications Commission examines the merits of the merger, we hope that you give serious consideration to communities like ours and the educational and economic opportunities this merger can deliver.

Sincerely,

George Boykin
